

**Amendments to the Specification:**

**Please add the following to the list of drawings in the section of the specification entitled "BRIEF DESCRIPTION OF THE DRAWINGS":**

FIG. 8 shows a heart beat finger ring.

FIG. 9 shows a heart shaped heart beat detector indicator.

**Please replace the paragraph entitled "Types of Jewelry Other than Earrings" i.e., paragraph [0031] with the following amended paragraph:**

[0031] Experimentation by Applicants have proven that the principals of the invention claimed in the '079 patent can be extended to other types of jewelry. Applicants have determined that heartbeat rings worn at other locations of the body (for example as shown in FIG. 8) perform just as well or better as compared to the earlobe. Other potential locations include the fingers, belly button, nose, toes, breast, and parts of the breast. Applicants have also determined that the flashing heartbeat monitor can be attached to skin as a patch with excellent performance. For example a heart shaped patch containing the electronic components described above can be applied on a skin region corresponding to the region of a person's heart (as shown in FIG. 9).
